Getting Started

1. Plug the USB connector of this keyboard into a USB port on your computer or laptop
2. Press "FN + PrtSc" to turn on RGB backlighting and "FN + Insert" to switch between the 14 lighting effects. Press "FN + Del" to choose from the 8 color settings. For example, press "FN + Insert" once; then press "FN + Del" repeatedly until you arrive at your desired color

Note
- Some lighting effects are not available in other colors

Editing Custom Lighting Effects
Editing lighting effect G1 example:

1. Press "FN + 6" to display the current custom effect (if any) for G1
2. Press "FN + Home" to enter customization mode
3. Press any key you'd like to light up in effect G1
4. Press "FN + Home" to save effect G1

Notes
- Press a key repeatedly to change the color when editing custom lighting effects
- Function key can't be lit up or customized when editing custom lighting effects
- Press "FN + Esc" to reset the keyboard back to factory settings

Clearing Custom Lighting Effects
Clearing lighting effect G1 example:

1. Press "FN + 6" to display the current custom effect for G1
2. Press "FN + Home" to enter customization mode
3. Press "FN + Home" again to clear the lighting effect for G1

FAQ

Why doesn't the keyboard respond after I connect it to my computer?
We recommend a direct connection to your laptop/desktop to avoid any latency issues. However, if this keyboard is connected via a USB hub, allow 10–15 seconds for proper detection, and avoid using any unpowered or underpowered hubs to ensure sufficient power supply to the keyboard.

What if some keys aren't responding?
Try unplugging it and plugging it in again. If this doesn't fix the issue, please contact us through the appropriate e-mail address below.

Product Care & Use

- Although this keyboard is spill-resistant, keep it away from water and never submerge
- If you accidentally spill water on this keyboard, immediately unplug it from your computer and turn upside down to drain (for other liquids, rinse with tap or distilled water after draining; then drain again). Wipe the keyboard with a paper towel and leave to air dry. Only use the keyboard when it's completely dry (which may take a few days), otherwise some keys may not work properly. Use a hair dryer on the cooler setting or a fan to dry it out faster. Use airflow rather than heat to dry
- This keyboard is compatible with most Cherry MX keycaps and other keycaps with the same stems
- Keep away from extreme heat

Warranty & Customer Support
